

SYNTHETIC WORKFLOW DEMONSTRATION

Document Processing Assistant

Missing information · review before approval

THE WORKFLOW PROBLEM

Documents arrive incomplete or unclear; an apparently filled field is not evidence that its value is correct.

WHAT THIS DEMONSTRATION SHOWS

This demo uses authored document fields and risk flags to show a human review workflow. It does not upload, parse or verify files.

FOLLOW THE DECISION

1. Open a synthetic document review and inspect its field evidence.
2. Identify missing, uncertain or risky information.
3. Attempt a review decision and observe blocked approval where evidence is incomplete.

TRY THE SAMPLE WORKFLOW

Compare a ready-looking sample with one containing missing or uncertain fields. Inspect why the review cannot be advanced, then reset the sample.

WHAT THIS DOES NOT PROVE OR DO

This demonstrates validation and review design, not extraction accuracy, document authenticity, regulatory compliance or processing of real files.

BEFORE A COMMISSIONED IMPLEMENTATION

Select approved document types, input limits, extraction/parser route, field-level tests, retention and human exception ownership before handling real documents.

EXPLORE THE WORKFLOW AND ENGAGEMENT

How engagements work: <https://www.pureenergy.systems/how-engagements-work>

Synthetic inputs. Human decisions. No client-result or production-readiness claim.

This handout describes a synthetic demonstration, not a client deployment or measured result. A real implementation would require separately agreed scope, access where required, acceptance criteria and support arrangements.
